Payment Options	Checkbox	Cash on Delievery UPI Card Payment

Task 1

- Create an HTML form with the above fields.
- Add a header named `New Business`
- On clicking submit show the form data in the console
- Use your creativity on how the form looks using the CSS that you learned

Task 2

- Create a Table to list the form details after clicked submit
- Once the form is submitted, reset the form so that we can add new entries

Task 3

- Add a new column named Actions which will contain an Edit button
- On clicking the edit button, use the same form to update the details
- The updated detail should be reflected in the table as well

Task 4

- Add Delete button to the Actions column
- On clicking the delete button, the corresponding row will be deleted
- Save and retrieve the data from the local storage so that even when we refresh the page, the old data will retain
